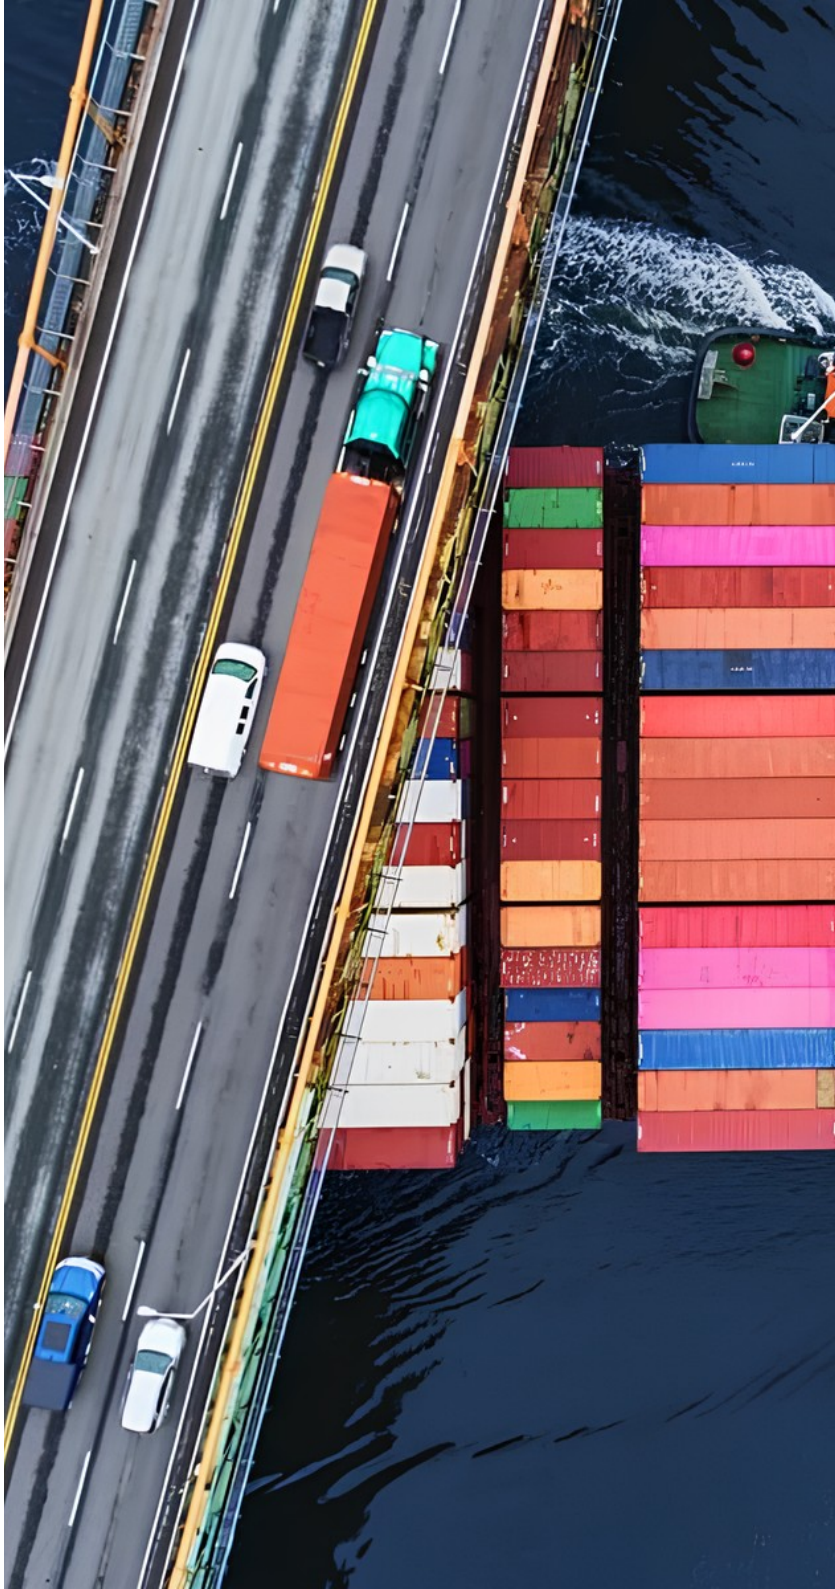
Supply chain management: challenges and opportunities in Europe
<Demo slides>

Semyon F., Oct 2024



Europe international trade data

According to OECD forecast, the five countries with the highest projected growth in import of goods and services are: Hungary, Lithuania, Poland, Norway, and Portugal. All between 11.5% and 5%.

Customers and their needs

There are 4 problem categories emerging in supply management specialists' discussions (Panelli):

Problem	Number of mentions	Total specialists on related conversations
Timing in capabilities and the constant re-arranging of the schedule • Demand interrupts and changes to production plan from sales (panelli: communicating change on the day) Remembering sales they shouldn't sales feeds (Sam: need times)	7	4/5
Lack of communication with vendors (panelli): "You hit the that number for quality issues everyone" • 90% of the time, it's the vendor's fault, but everyone blames us • Some part of supply planning is the communication process when trying to do just about anything	7	4/5
"The hardest thing for me is managing changes to our production plan. It's hard enough" • Dealing with urgency and leading delay throws a wrench that never stops" (Jaime)	7	4/5
"Biggest issues are dealing with delays, production issues, managing expectations" • Forecasting and demand fluctuations and keeping an accurate inventory	7	3/4

Europe market size per country

Germany, Netherlands, France, Italy, and Belgium are countries with the largest total import in featured product categories

Europe international trade data

84% of the European & Central Asia import is destined to the Europe itself & Central Asia (the most)
